Subject: Bylong coal Project
Date: Thursday, 20 April 2017 7:39:23 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

We don't need more mines to destroy the precious environment that could be used for far greater purposes. It is only the coal companies that benefit from these mines and they do not reclaim the environment after they have finished destroying it either.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Dennis Nickell

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 4:34:30 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Helene Blanchard Coogee, New South Wales, 2034, Australia

Date: Thursday, 11 May 2017 11:36:45 AM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

We should be investing in new technology, and in keeping bio-diversity and preventing extinctions, in think-tanks at Universities (with no-strings attached government funding to ensure unbiased results) examining how all cultures deal with creating a fair and clean society, and creating recycling that really deals with the industrial and household waste, and in examine the bio-chemical and ecosystem answers to our 21st century man made problems. There is so much constructive and profitable work to be done for an exciting and delightfully liveable future, from the simple, like growing hemp or bamboo plants for paper and wood and saving our forests, to working on the more complicated business of changing attitudes and increasing flexibility in manufacture (so that car manufacturers can convert to produce solar panels instead of being funded). The stupidity of destructive coal mines is very much an indication of the fear of embracing reality and the future with new, viable, sane

ideas.

Destroying the generous spoils of nature, rich soil and natural ecosystems, is criminal and will be seen so in the future with out doubt.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 8:07:28 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Peter Devereux

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 11 May 2017 10:49:20 AM

Dear Commissioners,

Please accept my submission of objection to the proposed Bylong Coal Project.

If it proceeds, this project will have disastrous and irreversible impacts on the water, agriculture, livestock and heritage values of the area.

In Australia, where water and arable land are at a premium, the establishment of another coal mine in this pristine valley would be nothing short of an environmental and social catastrophe.

My objections are as follows:

The proposed Upper Hunter equine critical industry cluster would no longer be viable if the hundreds of hectares of agricultural land, and several hundreds more of grazing land, were destroyed by the proposed siting of the Bylong Coal Project.

A productive alluvial aquifer supporting cropping, beef studs and agricultural production is now threatened by two open-cut pits alongside them on the floodplain. This is clearly unacceptable in a region where rural industries deliver millions of dollars to the economy each year. In contrast, a coal mine would deliver only short-term gains when, world-wide, the coal industry is in steep decline.

Water usage in the proposed mine is likely to result in permanent depletion of the aquifer. Based on current estimates, the loss of water from that aquifer will be greater than the recharge rate.

An important living laboratory for Natural Sequence Farming, Tarwyn Park, will be destroyed by The Bylong project. Currently under consideration by the State Heritage Council for listing on the NSW State Heritage Register, Tarwyn Park has informed and guided sustainable farming practices for forty years. Its loss to open-cut mining would be an inestimable loss for our country's rural producers.

Based on these objections, I urge the PAC to reject this project.

Dear Commissioners,

This is my submission of objection to the proposed Bylong Coal Project.

Coal belongs in the past. Australia should be leading the world with renewable energy, but it's not. Shameful.

The project must be rejected as it would open-cut Tarwyn Park, a heritage area and living laboratory for the Natural Sequence Farming method of regenerative agriculture.

Large areas would be destroyed that are part of the thoroughbred horse-breeding industry cluster or mapped as strategic agricultural land.

Open-cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production would be disastrous.

The alluvial aquifer must be protected. A mine would lower the alluvial aquifer by over ten metres and potentially destroy it forever.

Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Ingrid Skirka

Subject: Submission - Bylong Coal Project (R040/17)
Date: Wednesday, 10 May 2017 9:41:01 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 4:14:52 PM

Dear Commissioners,

Please accept this objection as a submission to the proposed Bylong Coal Project under consideration by the Planning Assessment Commission.

The project's likely impacts on heritage, agricultural land and soil, horse-breeding country, clean air and water availability will cause enormous and irreparable damage by a short-lived extraction industry.

The impacts of this mine on local air quality, and the impacts of its coal on greenhouse gas emissions must be taken into account.

The risks of 'marooned' coal assets are growing monthly, and any guarantees of local employment and site remediation offered by the Bylong Project backers must be considered as speculative at best.

My specific grounds for objection are:

- Destruction of several hundred hectares of strategic and productive agricultural land
- loss of several hundred hectares of land to be protected as part of the Upper Hunter equine industry cluster.
- depletion and likely loss of a productive alluvial aquifer currently supporting cropping, beef studs and millions of dollars worth of agricultural production.
- loss of the historic Tarwyn Park that pioneered the Natural Sequence Farming method of regenerative agriculture. I understand that the listing on the NSW State Heritage Register is being considered.

I believe the Commission should convincingly reject this proposal. The wisdom of a refusal will become more evident as the world gears up to seriously addressing climate change.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Megan Lewis Gloucester, New South Wales, 2422, Australia

Date: Wednesday, 10 May 2017 9:22:14 AM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 4:10:18 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

I am the Mother of 2 young boys – aged 15 and 13 – and I care deeply about the environment and the sustainability of my sons' future. They worry about the future environment that they will inherit from those adults who didn't think or care and who saw short term gain before the long term health of the planet and those who inhabit it.

The project must be rejected outright. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley. Coal mining is an antiquated dirty industry which will never provide the so-called 'jobs bonanza' that is often spoken of.

I object to the project for the following reasons.

Several hundred hectares of strategic agricultural land will be destroyed and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production. Does the government have a plan for where else this food will be grown to feed our ever growing population?

No mine should be allowed to draw on aquifers. Again, does the government not realise how precious these sources of water are? The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

Open cut mining rapes and thereby destroys the landscape. It cannot be regenerated. The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register. This is absolutely the right thing to do.

I urge the PAC to reject this project.

Yours sincerely, Sally Fryer – on behalf of myself and mytwo sons Louie and Thomas.

My family has bred and raced horses for nearly 90 years. My dad, Angus Armanasco, started as an apprentice jockey in 1926. He went on to be a champion horse trainer and started Sandown Lodge in 1965. I am still a director of that company and we have mares and weanlings at a property close to the Bylong Valley. I travel down there twice a year and love the whole area for its farms and horse studs. If this coal project goes ahead we will have to consider moving our horses to Victoria.

I urge the PAC to reject this project.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

Too much of Australia's prime agricultural land has already been damaged, and lost forever – yet it is needed for our quickly growing population. Where will we be able to source our future food from if we destroy the land we can grow it on. Isn't it time politicians and mining icons stopped the plunder of our current and future food bowls. Or is it their plan to have us rely on overseas food sources?

I urge the PAC to reject this project.

Yours sincerely, Diana Steele The Rock, New South Wales, 2655, Australia

Dear Commissioners, The NSW Department of Planning and Environment is corrupt. I believe the you, the hand picked political hacks that are laughingly described by this corrupt department as an “independent body” will some day face criminal charges. I know of many people who are working to have criminals like you charged.

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register. You are a bunch of crooks!

I urge the PAC to reject this project.

Date: Thursday, 20 April 2017 7:09:17 PM

Dear Commissioners,

You must accept my submission of objection to the proposed Bylong Coal Project.

The project's impact upon precious agricultural land, not to mention horse-breeding country will be catastrophic. The impact upon heritage and water are some of the worst ever seen for a coal mine proposal in our State. This mad proposal will cause enormous, irreparable damage to the environment and the lives of locals.

In this day of bountiful renewable energy, ground water, water tables and soil are far more valuable to NSW than opening up another coal mine. This is and should remain a pristine valley.

I object to the project for the same reasons as most right thinking people.

1. It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.
2. It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.
3. The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.
4. The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

As you know the State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register. We believe it will be listed.

So I urge the PAC to reject this project.

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Penny Everingham Farmborough Heights, New South Wales, 2526, Australia

It should be recognized that the coal industry is facing its demise. More and more the world is recognizing that alternative sources of energy are taking over. For centuries we have used coal to develop: what we have failed to recognize is the ramifications of utilizing this very dirty material. How many have died due to breathing coal-polluted air? What has been the cost to our Medical System to treat all the various maladies brought about by our over-polluted air? What of those who will suffer ongoing medical problems due to environmental contamination? Coal is simply a dirty product! From the time it is mined, to its transportation and finally when burned, not only releasing noxious gases but also causing OUR Climate to overheat and thereby upset the natural rhythm of OUR Planet! The irreplaceable damage to the land and water from whence this material is mined cannot be reversed.

I urge the PAC to reject this project.

Date: Thursday, 20 April 2017 3:51:08 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

Date: Thursday, 20 April 2017 3:50:31 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

I am writing to ask the Government to stop the Bylong Coal Mine and provide protection for the Tarwyn Park heritage property, surrounding horse-breeding country and farmland. An open cut mine for coal will devastate the land.

Tarwyn Park is a living laboratory for the Natural Sequence Farming method of regenerative agriculture. This method of regenerative agriculture needs to be encourage to protect food production and provision to Australians. An open cut mine would severely limit the progress of research and food production.

An open cut mine will destroy large areas of the thoroughbred horse-breeding industry, an industry which generates money and jobs, as well as prestige investment

The open cut mine is proposed for a floodplain alongside a productive alluvial aquifer. This aquifer supports cropping, beef studs and millions of dollars worth of agricultural production. The use of the aquifer by the mine will lower the alluvial aquifer by over ten metres, and potentially destroy it forever.

There must be a limit to where mining can occur. Destroying our best heritage, horse-breeding and farming country is a line that must not be crossed.

I urge the PAC to reject this project.

Yours sincerely, Dianne Drake Bondi Beach, New South Wales, 2026, Australia

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 3:38:47 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, michael asbridge North Narrabeen, New South Wales, 2101, Australia

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 6:05:33 PM

Dear Commissioners,

As one who spent most of his working life in the mining industry I am not opposed to extractive industries per se. However, just because a resource exists it does not necessarily follow it must be exploited. Competing alternative land uses must be considered and in some places the alternatives to mining are of such significant value that mining should be under a permanent moratorium. The Bylong Valley is one such place and Tarwyn Lark and its environs specifically should be protected. Therefore please accept this submission of objection to the proposed Bylong Coal Project on the following bases.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 5:56:02 PM

Dear Commissioners,

I have serious concerns about the proposed Bylong Coal Project.

If the project proceeds it will have enormous negative impacts on agricultural land, horse-breeding country and water resources. This proposal exhibits many of the worst aspects of coal mining.

Protection of our land is far more valuable for the people of NSW, and the world, than the destruction wrought from yet another coal mine in NSW.

The mine proposal would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

The two proposed open cut pits would be located on a flood plain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The proposed mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

And finally, the State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

Consequently, and in conclusion, I urge the PAC to reject this project.

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 3:26:59 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Donald Cook Roleystone, Western Australia, 6111, Australia

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project. Protecting our agricultural land and clean water is imperative. Global climate change will bring unknown changes to our country (and the rest of the world). Without farming land and (inparticular) clean water our children and grandchildren will be the people seeking help from others – refugees. We do not need more coal. The world is moving away from coal. There is no benefit to us from another coal mine.

I urge the PAC to reject this project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, Pamela Knobbs North Richmond, New South Wales, 2754, Australia

I urge the PAC to reject this project.

Please protect our farmlands for the future and not allow great big mining holes to destroy our environment. The mining companies never rehabilitate the land. There are over 50,000 abandoned mines where the land can't be used for anything. Stop thinking about just now and consider the long term future of Australia.

Yours sincerely, Sue Hamparsum Cammeray, New South Wales, 2062, Australia

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register. I consider Tarwyn Park a National Treasure and part of our Agricultural Heritage: too important to lose it's integrity.

I urge the PAC to reject this project.

Yours sincerely, Margaret Odgers Devonport, Tasmania, 7310, Australia

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

It is a crime against nature and the people of Australia to destroy our beautiful country in the name of big business. It seems to be a never ending fight to maintain the well being of Australia and the people who live here.

To mine and destroy beautiful county in the name if progress is despicable. To contaminate our precious ground water and threaten the livelihood of so many farmers is vandalism of the worst kind.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

Subject: Submission - Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 4:51:59 PM

Dear Commissioners,

Please accept this submission of objection to the proposed Bylong Coal Project.

The project must be rejected. Its anticipated impacts on agricultural land, horse-breeding country, heritage and water are some of the worst ever seen for a coal mine proposal in this state and will cause enormous, irreparable damage.

Water and soil are far more valuable to NSW than opening up another coal mine in such a pristine valley.

I object to the project for the following reasons.

It would destroy several hundred hectares of strategic agricultural land and several hundred more of land that was supposed to be protected as part of the Upper Hunter equine critical industry cluster.

It proposes two open cut pits on the floodplain alongside a productive alluvial aquifer which currently supports cropping, beef studs and millions of dollars worth of agricultural production.

The mine will dramatically draw down this aquifer and risks permanently depleting it because the predicted water loss is greater than the recharge rate.

The Bylong project will open-cut historic Tarwyn Park, which has been, for forty years, a living laboratory for Natural Sequence Farming method of regenerative agriculture.

The State Heritage Council is currently considering listing the world-famous Tarwyn Park property on NSW's State Heritage Register.

I urge the PAC to reject this project.

Yours sincerely, ank de Haan

Dear Commissioners, When will you realise the irreversible damage that will be done if this project goes ahead. Don't wish later you had not approved this destruction . Our water is our life. Destroy it and you destroy the future life of generations to come. Surely you have family's and perhaps grandchildren who will inherit your legacy . Don't approve this destruction We don't need coal get solar and wind going. I have solar on my house give subsidies to people to put solar on their houses . That's a far better way to invest money into . Please accept this submission of objection to the proposed Bylong Coal Project.

Subject: Submission: Bylong Coal Project (R040/17)
Date: Thursday, 20 April 2017 3:32:33 PM

Dear Commissioners,

I strongly urge the NSW Planning Assessment Commission to reject this project.

Its predicted impacts on prime agricultural land, horse-breeding country, heritage and water should be considered unacceptable.

In the face of the uncertainties of anthropogenically induced climate change, farmland and water are far more important to NSW than opening yet another open cut coal mine.

I object to the Bylong Coal Project for the following reasons.

It would severely impact or destroy hundreds of hectares of strategic agricultural land, and several hundred of hectares more of land that should be protected as part of the Upper Hunter equine critical industry cluster.

The proposal will open two pits on the floodplain alongside a productive alluvial aquifer which currently supports millions of dollars worth of agricultural production.

Many local ecosystems will be impacted due to the mines use of water which will dramatically draw down this aquifer and risks permanently depleting it as predicted water loss is greater than the recharge rate.

This mine will destroy Tarwyn Park, a working laboratory for regenerative agriculture practices and which is currently being considered for the New South Wales State Heritage Register.

Once again I strongly urge the NSW Planning Assessment Commission to reject this project.

Yours sincerely, Carmen Laidlaw Adamstown, New South Wales, 2289, Australia
