To the Office of the Independent planning commission.

Thankyou for the opportunity to be able to comment on the new information provided by Neoen requested by the IPC.

Question 2- Firefighting operations

I find hard to believe in an emergency fire situation they would be able to stop the rotation of the turbine blades where possible to a "Y" position to allow aircrafts to fly underneath in a given time frame. An emergency relates to a fire usually travelling fast and as I have had experience with fires previously this situation would not allow time for repositioning of turbine blades.

We need aerial support in this area for firefighting and not to mention crew protection, as this is the most effective for the 21st century, **lives & animals do matter.**

The koala habitat is real in this area and we don't need a reduced number of our Australian native due to a fire that cannot be put out effectively & quickly with aerial help.

I object to this project.

Yours Sincerely

Warren Lowrey
