Topic 1. Sustainability of current and future forestry operations in NSW

what happened to the pine timber plantations. can we do the same for other timbers. logging may be ok but it destroys the rest of the environment, ie landscaping, native animals, water supply, air quality.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

most people love the bush. why destroy it.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

this is a federal govt question as it relates to the massive increase in immigration of the last few years. again, what of our pine forest timber products. full brick houses with steel frame and roof could be reconsidered.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

i assume we can continue to replant our forests.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

that should be part of the job.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

it would be good but i cant comment
