Have had a look at this Plasrefine proposal

The subject site they're proposing to locate the facility however is within a 1:100 year flood prone area. This means that there is the circumstance whereby pollution, microplastic waste etc can be carried by floodwater into the water catchment downstream.

This water catchment is a major drinking water supply for human use.

Regardless of any other environmental impacts, for this reason alone, the proposal should be rejected and the proponent should find a more suitable site for this facility.
