An inexperienced operator of such a specialised high risk operation in a site bought for its low price with water flows to Sydney drinking water and nano particle plastic pollution that seeps into the brains of our children only makes sense to those who benefit in the short term. This project has so much risk to affect many many more people than would even know of it's planning. This is an obvious decision to object (I am making a submission that objects to this proposed development going ahead); to anyone who cares for their fellow humans, environment and integrity or even just good old critical thinking. We all die in the end of course but what quality of life is there, what is the point for any of us when it's short term greed over long term justice. Accountability on home soil to locals who are forced to live with the proposed development is a must for such a high risk project. This project does not have the necessary safeguards in place to be approved. Please consider this objection along with (I deeply hope) many others.
