---

Thank you for opportunity to comment on this proposal.

I do not support this project.

It makes no sense economically or environmentally. It is in prime agricultural land and threatens water

security in a time of uncertainty, with a record drought and climate change ahead.

Agriculture is essential

to our wellbeing.

The science around climate change, air quality, scope 1,2 &3 emissions is all robust and we face an existential threat.

Please consider our health, future and generations to come.

Yours faithfully

Dr Richard Abbott
