Subject: [SPAM DETECTED BY EXO] Submission: Bylong coal project
Date: Thursday, 11 October 2018 5:58:09 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Fiona Dhu

Subject: Bylong coal project submission
Date: Thursday, 11 October 2018 4:47:22 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

The IPCC have just now reported that we have to stop burning coal. That mean we in Australia have to immediately. It also means that we cannot be complicit in allowing coal from Australia being burnt overseas. In fact we should be responsible for the emissions of any of Australia's coal that is burnt overseas.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could "run dry" if the mine goes ahead.

Please do not allow this mine to go ahead.

Yours sincerely,

Lachlan Garland

- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

The IPCC's latest report has recommended that there should be no new coal mines opened, and no further extensions to existing mines. If this recommendation is ignored it will be impossible to keep emissions at 1.5 level

Subject: Submission on the Bylong coal project
Date: Thursday, 11 October 2018 7:32:32 PM

I wish to lodge a submission against the proposed Bylong coal project.

I strongly oppose this mine.

The Bylong Valley has remarkable cultural and heritage value, one of the most beautiful places in our region. It adjoins and supports the Blue Mountains World Heritage Area - and the proposed mine will substantially damage this.

But most of all we live with the knowledge that we should not be building new coal mines. No number of detailed reports detract one iota from this absolute and inescapable reality. It is simply a question of whether you choose to support the people of NSW - and what is right - or whether you choose not to.

Yours sincerely,
Peter Ridgeway

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Colleen Boland

I want the next generation - and beyond - to inherit a world they can live in without wars over resources like fresh water & without increasingly extreme weather events that 99% of scientists state are caused by human-induced global warming. No more coal mines, period.

Yours sincerely,

JoAnne Jaworowski

- NSW is in the middle of a DROUGHT. Coal mines use too much of this very precious resource as it is, so how are farmers to cope when the coal mine SUCKS THEM DRY?
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.
- Coal mining needs to be stopped by 2025 if we seriously are going to have any chance of limiting climate change to just 1.5*. We sit on 410 ppm of greenhouse gases in the atmosphere at present 450ppm = dangerous climate change.

Subject: Submission: Bylong coal project
Date: Thursday, 11 October 2018 5:37:01 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Peter Whipper

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- This mine will directly open cut strategic, productive agricultural land which cannot be replaced. Mining is a one-off for the few, and with climate-wrecking long run impact, but farmland is a nearly perpetual source of prosperity for the state and food security for the nation. All such land should be off-limits to coal mining.
- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.

Please reject the Bylong coal project completely because

- (1) we need to take develop commercial opportunities presented by clean energy sources
- (2) the mine will devastate the Bylong Valley heritage and tourist potential
- (3) quality agricultural land will lose its economic value
- (4) water aquifers will be irreparably damaged. We live in a fragile environment, prone to droughts. Water is more valuable than coal.

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

I find it strange that a planning body fails to look at the big picture and focuses on short term issues which in the long term cannot be economically justified according to recent analysis in the SMH editorial of October 10.

NSW needs a programme to move away from fossil fuels and this ad hoc approach to individual developments.

In particular, this mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

Subject: Submission: Bylong coal project
Date: Thursday, 11 October 2018 3:13:12 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

My reasons are firstly, effects on the Bylong Valley, Hunter region and NSW and secondly, global effects.

The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.

The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.

The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.

This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.

The Intergovernmental Panel on Climate Change has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change. The carbon dioxide emissions produced by the burning of the mined coal of the Bylong Valley will be greater than Australia's total annual emissions. Leaving this coal in the ground is a relatively easy way to limit global warming. Current estimates are that this will be 3 degrees by mid century, causing global wars over food and water following massive animal extinction.

Therefore this mine is not in the public interest

Subject: Submission: Bylong coal project
Date: Thursday, 11 October 2018 3:12:18 PM

This is a submission on the Bylong coal project. I strongly object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Pauline Allison

From: [REDACTED]
Subject: Submission: Bylong coal project
Date: Thursday, 11 October 2018 1:15:36 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could "run dry" if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

sheila zaman

I strongly object to a coal mine being established in the Bylong valley.

In this time of urgent action being needed to address climate change it is inconceivable to me that any more coal mines will be established in NSW.

There should be no more fossil fuel projects started in NSW (or anywhere Australia). Renewable energy projects are the only way to go and as quickly as possible. A new coal mine is irresponsible for the carbon pollution it will cause.

This is a submission on the Bylong coal project. I strongly object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

I find it hard to credit that this proposal has been allowed to get this far in the process. This mine should not proceed because:

- The Bylong Valley's landscape is naturally stunning, and has state heritage significance, as identified in the expert heritage report by Hector Abrahams Architects.

The mine will irreparably damage these values, and it will have broader heritage impacts, given it adjoins the Greater Blue Mountains World Heritage Area.

- This mine will directly open cut strategic agricultural land and no amount of 'rehabilitation' can replace it at any point in the future. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry. Why is that not a reason for it to be off limits?
- We know this mine will devastate the Bylong River and its alluvial aquifer, as Government experts warned internally that the river could "run dry" if the mine proceeds.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change. Hence no new coal mines should be permitted anywhere. I am a grandmother and cannot accept that our government is willing to worsen global warming and hence their future.

- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Rick Hultgren

Subject: Submission: Bylong coal project
Date: Thursday, 11 October 2018 11:44:58 AM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

I object to the Bylong coal project.

No 1. With the IPPC saying we must keep 80-90% of known coal reserves must be kept in the ground, it is totally irresponsible and against Australia's commitment to keep global warming well below 2 degrees, to open a new coal mines. It is also not consistent with NSW commitment to be carbon neutral by 2050.

No 2. In this era of drought it is totally irresponsible to approve a coal mine that will drain water from the Bylong River and adjoining aquifer.

No. 3. open cut mines destroy the landscape for ever. In the application there is always a rehabilitation plan. There is not a single example of open cut mine where the land has been rehabilitated to pre- mine use. The rehabilitation plans cannot just be accepted, they must be investigated fully.

Yours sincerely,
Peggy Fisher

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 6:50:52 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Kathy McKenzie

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

New coal mines are absolute madness in the current climate emergency we are facing. I cannot believe how regressive this government is in regard to climate policy. This mine will destroy a fertile valley which is worth much more to us in its current unspoilt state. We are sick of being ridden roughshod over by government decisions that are made only in the best interests of a few obscenely rich mining magnates. These decisions will cost votes as the people have had ENOUGH!

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

Date: Wednesday, 10 October 2018 6:50:04 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

It is completely unacceptable that a new coal mine should be considered at the very time the IPCC reports that all coal fired generation should be phased out as soon as possible to save the planet from 1.5 degrees of warming. There are now serious suggestions that at the very least there should be an immediate moratorium on new mines while a sensible response to the IPCC report is made. So this mine should absolutely not go ahead until the future of coal mining is decided.

But in any case, how can irreplaceable country of immense natural beauty and unique international significance be sacrificed for a few dollars in the pockets of some foreign company ? This is blatant inter generational theft of the very worst kind.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

We have enough polluting mines in the state and our Farmers are already stressed. Isn't a drought enough? And a complete disregard for the landscape around the mine isn't just sad, it's criminal. It's requests like these that give me no faith in our politicians, state or federal.

If the environment is not your concern look at the economics. Coal is dying whether conservatives deny it or not.

Please listen to the scientists, not the spinsters and reject this application.

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 6:32:37 PM

This is a submission on the Bylong coal project. I make this submission as a citizen with experience in the mining industry, including fossil fuels, and also as someone with a profound respect for science. I also am cognisant of the recent UN report on the global warming threat, specifically with its warning that coal combustion must be phased out as soon as possible. The essence of the UN report was that if coal has a future then humanity doesn't.

So, I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because of the following well-recognised negative consequences :

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could "run dry" if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 6:28:15 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- 1. The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- 2. The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- 3. It is a shocking thing to cut across prime, irreplaceable agricultural land which cannot be replaced. HOW CAN WE CONTEMPLATE DESTROYING SUCH MAGNIFICENT FARMING LAND?? LM All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government EXPERTS HAVE WARNED ABOUT THE MINE'S IMPACT ON THE BYLONG RIVER. Experts have warned internally the river could "run dry" if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

PLEASE CONSIDER THE BIG PICTURE IN RELATION TO MINING THE BYLONG VALLEY. PLEASE DO NOT GIVE APPROVAL! THE BYLONG VALLEY IS A MOST IMPORTANT PLACE IN NSW THAT SHOULD BE PRESERVED FOR ITS BEAUTY, AND IMPORTANTLY, ITS IRREPLACEABLE AGRICULTURAL VALUE!

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.
- we cannot open new coal mines and avoid catastrophic climate change.

Yours sincerely,
Vivian Harris

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 5:41:45 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

* The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.

*The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

* This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.

* The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.

* This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.

* The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

* Farmers are rallying to reject the governments ignorance on climate change, and will not vote for the Nationals or the Liberals.

To go ahead with this mine will put another nail in the coffin for our food security (Prof Tim Reeves Uni of Melb)

Speakers at a Farmers Action for Climate speakers (Prof Mark Howden Director of ANU Climate change, agricultural adaptation)

(Lucinda Corrigan FCA chair, beef producer, business leader, agri business)

Might be worth reading what these people have to say. The coal lobby are wealthy and apply tremendous pressure to any organisation making decisions about their wealth making ventures. Maybe you can look at what is best for the country and its people.

To add yet another mine is not managing climate risk.

Our children and grandchildren have no insurance police to manage such risk.

Yours sincerely,

Elizabeth Wright

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

Firstly the IPPC said no new or extended coal mines if the world is going to escape temperature increases over 1.5 degree.

Think about your children and grand children they will suffer if you approve this mine.

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.

- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.

- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.

- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could "run dry" if the mine goes ahead.

No money now or in the future will compensate for the damage this mine will cause to the environment, Australia and the world.

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 5:05:20 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

We are at a time and place in the history of the human race where decisions we make now will have irreversible consequences for our children and grandchildren, their quality of life, the environment in which they live and even their survival. The short term political cycle seems incapable of managing issues of long term consequence for us all. (Witness the federal government's failure to even have an energy policy). Decisions for the future need to be made now and by informed parties exercising powers independent of political influence, such as the Independent Planning Commission. I'm hoping that every member of the Commission will be able to look their children and grandchildren in the eyes and be able to say " I made a difference to your future when I rejected a new, huge coal mine at a time when it was crucial to do so".

I have travelled recently through the Bylong Valley and all planetary considerations aside, it is an area of unique beauty and balance between very productive farming, scenic and environmental values.

Please refuse this mine.

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 4:58:28 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Now is the time when we need to be the leaders in the movement to stop polluting our atmosphere, land and water cycle. Stop this unnecessary coal mine from destroying the Bylong countryside and as a consequence, you will stop the burning of the extracted coal and the ultimate pollution that ensues. This important act for the people now and in the future is within your power.

Hence I reiterate that I object to this coal mine and implore the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Vivian Lyall
