The last letter re above was in regard to increase of footing required for Modification (Increase in Blade & construction) The letter was from the Senior Planning Officer, Diana Mitchell, Resource & Energy Assessments, Planning Services, N>S>W>8 May, 2018. It was stated the size & type of the footings required for either approved project or modified project had NOT been received ONLY approx. dimensions has been received. The necessary level of BLASTING had also NOT been given. This fragile environment must require very specific level of construction. Has this been done? We must protect this very significant heritage range which no one has shown any regard. PLEASE review such a dev. & no Modification to greatly increase such a project. Regards Angela Regan
