I would wish to point out that the United Wambo coalmine is destructive to the environment and should not proceed. I would point to the report by Professor Will Steffen, Emeritus Professor, The Australian National University whose opinion is a serious response to the issue of Climate Change, and the viability of future coal mines. Like many of us (especially with children) I am very concerned about our future on this planet, which we seem to be doing our level best to degrade. Thank you for your time. Michael Collins.
