**I strenuously Object to Oxley Solar Electricity Generating Works + BESS as it is an extremely detrimental, environmentally destructive plan with no benefits to Australia whatsoever.**

**As part of the totally disingenuous, Fake Green RenewaBULL Solar/Wind Energy Poverty Grift & Ponzi Scheme/Scam - which is glaringly obvious to anyone with eyes that see - this is a RenewaBULL ‘Transition to Extinction!’ Extinction of our Healthy Uncontaminated - Life Sustaining Land/Water, Agricultural Food Production, our Ecosystem, Biodiversity, Precious Flora & Fauna/Essential Ecological Habitat, Rural Communities, Australia’s Economy, Manufacturing & Industry, National Security & Our Children’s Future.**

**After more than 4 years of experiencing the horror of neighbouring Industrialised Solar, the**

**devastation of our local Bomen/Eunony Valley area caused by this insufferable blight & sick with worry - fearing for a contaminated future for our district & vital water sources - including Wagga's water supply - the Murrumbidgee River - it is clearly obvious that no State, Federal or associated significant Government body has done a thing to ensure the Public Health & Safety of human beings in forcing tens/hundreds of thousands or millions of Toxic classed Solar Panels - predominately all unethically produced by cruelly tortured Uyghur Slave Labour Supply Chains or reliant on their polysilicon components. The recently reported rapid progression of the PFAS plume now impacting West Wagga within 2 years - instead of the predicted 50 year window previously suggested - should ring alarm bells all around Australia regarding the imminent threat of Industrialised Solar's leaching, toxic heavy metals - including lead, Bisphenol A (lethal to young children - as toxic as blue asbestos) shedding from Wind Turbine Blades in a matter of a few years & toxic residue from Lithium Battery Fires - all a Public Health & Safety Risk presently being intentionally ignored by Policy Makers, Planners & the Assessment/Approval process - despite this being a glaringly obvious serious/irreversible environmentally harmful**

**risk for contaminating our life sustaining food resource land & vital water sources.**

**The Government have presumed & pretended ‘somebody’ credible is responsible for the accreditation & ‘somebody’ has done the essential research to prove Health & Safety for human life & all**

**life forms of the co-existence of Industrialised Solar/Wind Electricity Generating Works & BESS midst our rural communities & FOOD Bowls & vital water sources but no one has done a thing to date anywhere in NSW/Australia to determine these risks & ensure Public Health & Safety.**

**Not the CSIRI, DPIE, NSW Farmers, NFF, Food Safety, EPA, - not even the much lauded, once trusted bastion of commonsense & a voice for Mothers, Children & Babies - the CWA  
.....NOBODY!**

**They all appear to have adopted the Woke mentality of virtue signalling being prioritised with dodgy, unfounded ideology at their core & no reliance on scientific rigour, integrity, ethics or engineering facts .**

**Policy & Approvals have been based on totally impractical, ideological lunacy & Garbage In Garbage Out Modelling Theory with Solar Panel**

**Accreditation done by the CEC - the Solar/Wind Industry itself ie. 'Dracular in Charge of the Blood Bank' - with no parameters regarding Public Health & Safety, No toxicity ratings, No identification of heavy metal components etc.**

**The Oxley Solar + BESS plan poses a present & ongoing danger during the whole operational life & thereafter - with all of the Principles of Ecological Sustainable Development deliberately ignored in their true practical reality sense - replaced by a totally dodgy, fudged scenario of manufactured, disingenuous gobbledegook in the EIS & in the NSW Government & DPE recommendations.**

**The Precautionary Principle has been defied at every turn despite the fact that it is glaringly obvious that all Solar panels are classed as Toxic, all polysilicon & cadmium telluride Solar panels have likely/ inevitable serious/irreversible environmentally harmful consequences leaching numerous heavy metals including lead as they age & degrade on site, are susceptible to being fractured by hail, are an increased fire/smoke hazard risk with carcinogenic & teratogenic consequences.**

**The NSW/Federal Gov have failed their Duty of Care to the Public by disingenuously deceptively manipulating & ignoring all the Principles of Ecological Sustainable Development - irresponsibly & unjustly rolling out their Risky Moral Hazard with NO Social Licence - Against Our Will - Without Our Consent - Failing to Perform Due Diligence with their Risk Based Procedure regarding the serious, irreversible, extremely detrimental life threatening impacts - including:-**

**\*Electrical Force/Electromagnetic Radiation resulting in**

**Brain Tumours & Childhood Leukaemia (eg. 2 people were jailed regarding the death of 19 children in Cesano Rome - linked to the Vatican Radio Mast.)**

**\*Public Health & Safety Risks & Potential Death from Electrocution due to Non-Compliant Solar Construction Failures.**

**\*Energy Poverty causing Suffering, Hyperthermia & Death/Energy Deprivation causing Extensive Hardship, Austerity, Distress, Collapse of Businesses/Industry & Loss of Livelihoods.**

**\*Toxic Contamination of our Life Sustaining Food Resource Land & Vital Water Sources from Solar's environmentally harmful numerous heavy metals including lead (as described by**

**Professor Paul Dastoor - University of Newcastle  
Information & Physical Sciences +College Of  
Engineering Sciences & Environment - on the  
ABC RN Radio Science Show in 2022 with Dr  
Jonathan Webb.)**

**The NSW State/Federal Government, EPA, DPI-  
Ag, DPIE/DPE, IPCN & Regional Planning have  
all been made fully aware of the Developers &  
various EIS author's untrustworthy, dodgy  
antics & the plethora of false claims which  
DPIE/DPE & IPCN have unbelievably,  
neglectfully, irresponsibly & deliberately  
accepted to date - without any independent,  
reputable, peer reviewed research & scrutiny -  
with no scientific rigour, no integrity, no ethics  
& no engineering facts in order to to  
substantiate their own extremely detrimental,  
wrong Approvals - as was the case for Greater  
Hume's seriously detrimental & fiercely  
Objected to Walla Walla, Jindera & Culcairn  
Solar Electricity Generating Works - all  
approved Against the Will of the Community &  
Council - Unjustly Forced on them Without  
Their Consent!**

**Like all Objectors to this pretty Dangarsleigh  
area - now planned to be cursed by a money  
hungry, Fake Green Developer with the blessing**

**of the naive or foolish, money hungry Armidale Council - who will ultimately be responsible/liable under the POEO Act for any Contamination or Pollution caused by Oxley Solar & any Solar/Wind Electricity Generating Works in their Shire, the fact that there are already other RenewaBULL ruination in the area makes it even more imperative that the Hosts & inevitably Armidale Ratepayers are not left with the Bain Marie - as outlined by AEIC Andrew Dyer - when the precious natural environment & reliably productive RU1 productive Agricultural Land of this Oxley Solar & BESS site will be irreversibly ruined forever through denuding of the landscape, destruction of biodiversity - mycelium, soil biota, worms, dung beetles etc., sterilisation of the soil, dry land salinity & toxic contamination on site, for surrounding land & water sources from Solar's heavy metal leachate.**

**Insects will be detrimentally harmed & consequently the birds & fish, etc. that rely on insects as their food source will perish. A terrible outcome would result for the Gara River with its onsite aquatic habitat and vegetation - mapped as Key Fish Habitat. The toxic risks for the Macleay River are extreme!**

**The extremely rare, Critically Endangered**

**migratory Australian Painted Snipe will lose its vital water habitat of ephemeral streams & numerous water courses in this flood prone swampy area - displaced by 385, 280 panels of Industrialised Solar that have no place midst this idyllic natural habitat & co-existent healthy food production.**

**Where is the essential, ongoing, independent expert testing & reporting regarding heavy metals of the soil & onsite/run-off water, a testing regime for toxicity levels in grazing sheep, the essential Heat Island Effect impact expert research - commensurate with the size of the Oxley Solar footprint - so significantly greater than Professor Greg Barton Gafford's tiny Arizona research experiment from whence he went on to admit in the Shepparton Solar Hearing that the 30m effect he had established would be greater - increasing according to larger Solar footprint - with more definitive research required - hence DPE's acceptance of the minimal 30m impact is wrong & must be accurately & honestly assessed to determine the obvious 'em impacts on the surrounding ecosystem, agricultural productivity, pollination & insect development.**

**Where is the Solar requirement for bunding to**

**catch any leachate from various damaging weather/fire event scenarios?**

**What is the action plan to immediately remove excessive quantities of damaged Solar panels prior to contamination occurring?**

**What is the planned destination for this bulk toxic waste - eg. 68 semi-trailer loads of Solar panels replaced Hail Fractured Solar at Woolooga Solar, Gympie December 2022 but the secrecy behind this environmental disaster & the Solar Fire on site 2 years ago have kept the tragic facts hidden from the public & not properly disclosed for fear of tarnishing what is an extremely environmentally destructive & deceitful RenewaBULL industry.**

**Even one of the 3 Independents Wagga MP Joe McGirr - responsible for foolishly calling for the Decarbonisation of NSW within a decade, had to admit the practical reality on ABC radio in 2022 - from his own Wagga Electorate experience - that Solar Factories are environmental vandalism - not clean & green at all! He raised serious concerns about Food Security, Sterilisation of the soil & dry land salinity.**

Instead of believing the lies & deceit dished up by developers as DPIE & IPCN have previously done in believing that

‘Our Solar Panels Will Save Your Lives’ & ‘Our Solar Panels are NON Toxic’ & Industrialised Large-Scale Solar Panels (500,000) “will soften & blend into the natural landscape’ & that exactly the same company NGH Consulting - who dismissed, fobbed off & manufactured mitigation for unmitigatable undulating scenarios - similar to Oxley Solar’s undulating land every detrimental impact raised by the local community it’s high time that are some practical reality, fact based Assessments.

I therefore encourage the IPCN to visit the Bomen/Eunony Valley to see the series of photos provided to you as evidence of the extensive, irreversible Environmental Destruction forever!

As clearly outlined by Criminal Barrister Raymond J Broomhall - Electrical Force causing Personal Discomfort is ‘Criminal Assault’ - yet EMF & EMR have been fobbed off as of no consequence by the Developer’s EIS & the NSW DPIE Assessment.

Similarly, the “Shambolic Policy Making” & totally flawed Planning/Assessment/Approval process has the ‘Cart Before the Horse’ - intentionally

eliminating & depriving the Australian Public of long proven reliable, affordable, plentiful, secure Australian Coal Fired Power & recklessly rushing to irresponsibly, illogically replace it with far more environmentally destructive, inferior, unreliable, intermittent, pathetic, Stone-Age Solar/Wind generation technology that has an astronomically costly, personally/industry/economy wide unaffordable, devastating impact.

Rather than being part of the delusional, 'Cloud Cuckoo Land' 'Green Energy Transition Superpower' being fancifully proclaimed adnauseam via deceitfully discredited politicians & carpetbaggers with vested interests - the practical reality looming blackouts, AEMO paying off manufacturers to load shed just to meet their discredited ISP.

References- ISP Report, Alan Moran - Regulation Economics, Sunk Cost Trickery & Cost of Basic Food Staples Reliant on Electricity - My Bread,

This horrific 'Transition to Extinction' Footprint has a long proven & independently/reputably/irrefutably substantiated pathetic capacity factor of only 25/30% respectively & the FIRE RISK FACTORS HAVE NOT EVEN BEEN RESEARCHED

Lynette LaBlack
