Subject: Elgin Solar Installation at Glenmie NSW  
Date: Wednesday, 6 December 2023 8:25:43 AM

Imagine huge monstrous electricity towers across this sublime beauty.

The destruction of natural environmental beauty across the globe has become a real issue:  
The Wind Turbines at Crookwell NSW and elsewhere in Australia - these do nothing for the environment and destroys the beauty of nature in every respect.  
Overseas nations have also built wind turbines and have effectively destroyed the natural beauty of their own countries.

Must we do the same everywhere in Australia? And for no good reason as solar and wind installations are not as effective as claimed?

This photo is within the 10kms city limits for dangerous devices as stated in a previous submission to you from me. This is part of the area which will be adversely affected by the Elgin solar installation, namely by electricity towers.

The existing power lines are bad enough, but huge new towers would be visually destructive and polluting. There is indeed such a thing as visual pollution - advertising billboards, litter everywhere, decaying buildings, huge power transmission towers, wind turbine installations, solar installations.....and the list goes on.

Land has been made available for such installations further west. The Elgin proposal and attitude towards local communities does not mention any alternative location - they are "hell-bent" on developing this field, and yet they do not Own it.

Too many questions! Far too many!
