Subject: Elgin Solar Installation at Glamire NSW
Date: Wednesday, 6 December 2023 8:10:15 AM

This photo clearly shows 3 situations:

1. The sheer beauty of this area, with sweeping fields of rich contrasting yellows, greens, and blues.
2. The fertility of the area as cropping land, as the Crops in the soil shows. Elgin maintains in their official report that the land at Glamire is pastoral land only. This is completely incorrect. Animal grazing only occurs between crops as a natural rotational system to naturally fertilise the fields for the next crop. If a field is left fallow (empty) it is because this is also a natural way to rejuvenate soils for future cropping. This is mentioned as a standard farming / cropping procedure even in the Bible.
3. Existing Power lines. These undulate across private farms in an ugly manner but an increase in power from 11kv to 66kv will require an upgrade in the lines / cables to be used, with new stronger poles and infrastructure, also to undulate in an even uglier manner across several kilometres of private farms, which also reduces the resale value of all these farms.

I trust this is some evidence that the Elgin proposal, submission, and reports are completely incorrect. They are false reports submitted to give favour TO the Elgin proposal, and are not based on Fact, or Reality.
