Subject: Hills of gold wind farm hanging rock NSW new information
Date: Sunday, 30 June 2024 6:11:20 AM

".... based on IEAPET's advice that constructing 62 turbines is the only viable option for a wind farm to proceed at this location and given the lack of other mitigation provided by the Applicant, the Department recommends that it would be in the public interest to approve turbines 53-62 to provide 384 MW of renewable energy to the State of NSW, with strict conditions for the acquisition of Lot 47 DP753722 (the land which contains DAD01)."

I refer to above statement.

I wish to remain anonymous

I am ratepayer in Nundle and have a home in Nundle NSW

I strongly object to the aquisition of Lot 47 DP753722

This is a foreign company pushing its way into our lives.

Transport issues and biodiversity issues are not yet resolved and the lives of so many people have been disrupted for 7 years. I cannot believe the audacity of trying to acquire private property .outrageous.

I urge the IPC not to approve this outrageous wind development,

Ratepayer
