Organisation:	Key issues: <i>Biodiversity, Traffic and transport, Agricultural impacts and land use, Social and economic</i>	
Location: <i>New South Wales 2355</i>		
Submitter Type: <i>I am a member of the local community who would be particularly and directly affected by the proposed development</i>		
Attachment:		

Submission date: 3/24/2024 10:54:04 PM

I am told that I will see the top of the turbines from my place but I am concerned about the cumulative impact all these industrial developments (so called green energy) will have on me and my community. All the people here who want to work are already working, most in Tamworth. All these industrial developments including thunderbolts will choke the New England Highway as they are built. How would the planners like it if emergency services were not able to attend when one of their relatives need them. These OSOM vehicles will stop people from getting to work, stop ambulance, fire and police from attending emergencies. These vehicles will hold up traffic from getting up and down the Moonbi Mountain.

How can these developers and planners really believe that they can wipe out endangered flora and fauna and replace them by paying offsets. You cannot replace mature trees. Physically impossible.

This country has granite soil. Any roads made will cause erosion as when it rains these roads will become a river of water which will cut gullies out each side and across the road thus making them impassable.

All these industrial developments are causing massive mental health problems for residents already. Just imagine what will happen when construction begins. I don't think the planners and owners of these 'farms' will be attending the funerals when neighbours cannot stand it anymore.

Another issue is the money these industrial developments are going to communities affected. Giving it to the councils who are always looking for more funding just buys their agreement for these developments and won't be spent in the community that will be affected the most. A better way would be to divide this money between all the residents of the closest village to help them pay their electricity bills.
