I am very concerned about the proliferation of solar panels on arable land. These solar panels are toxic to the environment and a disaster to the wildlife of Australia.

We are effectively sending our wealth off shore to China. At the end of their effective life what are we to do with these millions of useless solar panels. Impossible to recycle and full of toxic chemicals that will poison our ground water if sent to landfill.

We have to rethink other ways to make clean energy. Personally, I think we have to think about nuclear, it is the only sensible way forward.

Regards,
