Topic 1. Sustainability of current and future forestry operations in NSW

BOB BROWN FOUNDATION

Tell Premier Minns to end native forest logging: submission guide

3

How to make an
online submission

-

Fill in the fields of the
online submission template
using some
of our suggested points.

-

You can also upload a document instead of filling out the
submission template. You can use some of the suggested
points we have included below.

Talking points

1.

Sustainability of current and future forestry
operations in NSW

-

I fully support an immediate end to native forest logging
and a future industry based on sustainable plantations

-

Native forest logging is driving the endangered koala and
Greater Glider to extinction. An urgent and immediate halt
to logging should be placed over core Greater Glider and
koala habitat

NSW logging is subsidised by the taxpayer and makes an
economical loss

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

With the process to create a Great Koala National Park across
parts of the Mid-north Coast underway, Forestry Corporation
NSW has been intensively targeting some of the most critical
koala habitat remaining in Australia.

Over 18,800 hectares of core koala habitat is currently
being logged or is scheduled for logging within the Great
Koala National Park assessment area. This works out to be
around four times more logging operations per hectare

than the remainder of NSW.

Greater Gliders are being targeted

Over 11,000 hectares of Greater Glider refugia is currently being logged or is scheduled for logging in the near future.

Four key examples of this targeting are Tallaganda, Badja, Styx River and Tuggolo State Forests. Community surveys over the last 12 months have found a total of 571 Greater Gliders and 154 den trees using on-ground spotlighting and thermal drone surveys. These surveys are ongoing and indicate that there are high densities of Greater Gliders within these area

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

An end to native forest logging sits well inside the realm of possibility. In fact, the transition to a plantation-based industry is nearly complete, with around 90% of Australia's timber needs already being met by current plantations.

The remaining 10% can easily be satisfied by stopping the export of unprocessed plantation wood and improving the domestic management of existing plantations.

There is no need to log public forests to build houses.

Products from NSW logging operations are mostly woodchips for export and other low value products, such as pallets.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

An end to native forest logging sits well inside the realm of possibility. In fact, the transition to a plantation-based industry is nearly complete, with around 90% of Australia's timber needs already being met by current plantations.

The remaining 10% can easily be satisfied by stopping the export of unprocessed plantation wood and improving the domestic management of existing plantations

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

The true value of our native forests does not come from wood production, but from their critical role in carbon storage, the water cycle, providing critical habitat, reducing fire risk, recreation and spiritual connection.

-

NSW logging is currently subsidised by the taxpayer, which I object to.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Native forests are priceless, their value is not measured by

accountants and profit-greedy exploiters but by the life
they sustain.

End native forest logging and stop fossil fuel emissions
