BARHAM,
Date:08.10.2024.

Dear Honourable Dignitaries & Panel Members,
Of The panel for The Future of the Forest Industry in NSW.

My self [REDACTED], Owner/Operator of the Bp service station in Barham, Nsw .a beautiful river country town renowned for its natural beauty ,fishing, agricultural and most importantly sustainable logging. bordering with Koondrook ,Victoria. Together the twin towns of Barham and Koondrook have flourished wonderfully along with the boom in logging and agriculture for the past few decades not majorly effected even when they were severe droughts or other adverse situations in the area as the logging Industry & agriculture both kept the economy in healthy state not affecting the community much ,when the agriculture sector is hit by drought or water crisis it's the logging industry that helped lot of families in the community stay unaffected by generating more jobs and bringing more people to the community and that in turn helped lot of small and new businesses like us to thrive to what we are currently now .and wood logging is like integral part of the community as every second person in the community is either directly or indirectly dependant or benefiting from or contributing their part to the sustainable logging. And can't even imagine thinking what would happen to the community and it's people if it has to be shut down. The bare thought of it happening would be a direct consequence of manmade (political vendetta) and cause earth-shattering catastrophe widely affecting the people and community who are mainly reliant on the wood industry destroying their livelihood and lead to a ripple effect destroying the neighbouring communities too by wiping out their main regional growth sectors.

So do please consider our kind request of letting the wood industry breathe and help the businesses and community depending on it thrive too .rather deliberately massacre the community as a whole by shutting the industry down.

Kind Regards,

BARHAM ROAD HOUSE PTY LTD.

T/AS: BP BARHAM
