Topic 1. Sustainability of current and future forestry operations in NSW

It is unsustainable and should be stopped .

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Are of utmost importance , and should always be taken into consideration first and foremost .

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Should not come into consideration at all . In 2024 there must be better materials .

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

All hardwood plantations wether public or private , should be off the table .

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Have not worked in a responsible or correct manor .

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

I just do not see any benefit to the environment or climate change being done by cutting down the worlds lungs [trees] , The earths natural umbrella against heat trees need to be grown , and not cut down .
