Topic 1. Sustainability of current and future forestry operations in NSW

High time all these forests were saved. The best way to stop climate change apart from stopping coal mining. As we all know: Ehen said and done. All is said and nothing done.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Australia has one of the highest extinction rates in the world due to government mass coruption.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

There is plenty if pine plantations for this. Hardwood can be grown too. Not taken for free.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Companies like Visy find it viable to grow their own pine plantations. Why not foreign paper companies? Because native forest timber is almost free.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

No more logging of state forests. As we are desperately planting forest the government is cutting the trees down.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Ecocern Pty Ltd has been making copy paper , bags and packging for the past 40 years. Not 1c of government money has been given to assist but hundreds of millions $ given to foreign paper companies who take our native forest for almost free. Stamp out this mass corruption.
