Dear Independent Forestry Panel Secretariat

The current deforestation occurring in our native forests is devastating, impacting so many of our precious and unique flora and wildlife, being the main cause of many species becoming endangered. This kind of damage it is causing is permanent. I have great concern and fear of the future of our native forests and the wildlife they are home to. Furthermore, our native forests are places that give myself, my family and friends meaning and are an anchor for our mental wellbeing. I also know this is the case for many others. If we do not do all we can now to look after our native forests, not only will it be devastating for our wildlife and use nature lovers, but we shall also be deprived from all the benefits it provides. This includes storing carbon, cleaning our waters and improving fire management. I want our country to take priority in protecting native forests. I support ending native logging from TODAY! I support sustainable plantations for the future.
