Topic 1. Sustainability of current and future forestry operations in NSW

Native forests should have no logging.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Threatened species of greater gliders koalas bird species snakes small creatures all make up an ecosystem. It is vital they are saved.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Mining for fossil fuels should cease. Timber for housing should come from forests that have been planted.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

No exceptions should be granted for timber supply needs. The timber industry has had years to plan and plant trees for this matter.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

From what I have read the industry isn't to be trusted. They would railroad any Aboriginal forest management models if it suited them.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

If I understand this question clearly you are asking about carbon capture. If so I think it is a complete nonsense.
