Topic 1. Sustainability of current and future forestry operations in NSW

I do not think it's sustainable at all to continue to cut our forests on public or private lands and call for a Full Moratorium on the logging of Publically owned forrests. These publicly owned forrests are needed for habitat for many rare, endangered and threatened species. They are also important for the creation and purification of clouds, rain, waterways, erosion protection and slowing of flood waters. The subsidies given by Government to destroy our forests makes most of us think Government is corrupt and short-sighted. Australia is a leader in the extinctions of our Native species which is horrifying. Our Government has been failing in its duty of care to the Environment and we need that to change. Climate change is a reality that all people of Lismore NSW know too well having a flood one story bigger than our normal one story high floods...TWO STORIES WORTH OF FLOOD. Let that sink in as we are not the only ones facing floods which have been in part created by Government. Making the coastal highway higher (despite protesting locals of the Wardell/Broadwater areas) stopped the drainage of this major flood, cutting the trees down in many places increased the flood, allowing the filling in of wetlands as part of a North Lismore Plateau development increased the floods and geoengineering/ chemtrailing increased the floods - they were chemtrailing Southern Queensland just before. To all the people who will make the decision to push our Environment to the brink of no return or to protect our fragile compromised Environment know all future generations will either be saved or ruined by your decisions and you will have very good or very bad Karna by your choices. Please protect our trees and wildlife by making a full Moratorium on the future cutting of Public forests. Private land needs better rules to protect Vulnerable, Threatened and Endangered species. Thankyou to all who will protect.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

The Environmental values are huge or these forrests would not have been protected already. The fires have made the value of sunburnt Forrest greater. Aboriginal Cultural values are vast too- some known and some to be discovered due to the massacre, enslavement and dispossession of Indigenous people Herr. I have a daughter [REDACTED] who was lucky enough to grow up in Arnhemland. I have noticed there are less problems within Aboriginal Communities where the land, firrest and creatures have not been destroyed by mining and Forrest cutting.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

There are many materials that can be used to build. Plantation timber is the future of the Timber Industry

Public submission

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Instead of subsidising killing habitat in Public forrests subsidise plantations. Make it clear that a Moritorium will take place and employ people to grow our future timber needs.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

I fully support Aboriginal Forrest management and know they would be the best people to help reduce the fallen logs that aren't best for habitat (for firewood) and to reduce risk of bushfire with controlled burns in the right season. I met a man once who cried telling me that making firetrails he had destroyed a sacred sites. The risk of this is alot less with Indigenous people.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Trees are part of reducing Climate Change. They cool our planet, produce our air and water.

Thankyou. I believe an inquiry is also needed to look at ways the Government contributed to the deluge Lismore experienced. The raising of the highway blocking drainage of flood waters was protested and ignored as was the filling in of the wetlands at North Lismore Plateau. The spraying of everything with chemtrails creates many problems including higher burning fires according to submissions given to Orange County US before they banned them....They have created flooding in many Countries yet you still poison our air, food and water with these toxic chemicals. Please stop this practice that costs Billions in floods and fire damage as well as costing alot of lives. Alot more people died in the Lismore floods than were advertised.....
