Topic 1. Sustainability of current and future forestry operations in NSW

NSW has so little native forest left and I do not believe logging of native forests is sustainable.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Endangered and threatened species rely on our native forests for their survival. Australia should not continue to reduce native animal habitat through the logging of our native forests.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Consumers are already turning away from native timber products in order to protect our native forests. They do not trust that native forests are logged legally or sustainably.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

The ending of logging native forests will assist NSW meet its obligations to reduce the impact of emissions.
