Topic 1. Sustainability of current and future forestry operations in NSW

Forestry operations are destroying biodiversity for little gain. It is drying the forest floor and making it vulnerable to fire.

Nsw forests are best served with ecotourism and adventure tourism. Transition all workers.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

There are 11 glossy black cockatoos left in Brunswick shire. Koala numbers are still low since the fires. Greater gliders and honey gliders are disappearing fast. For wood chip.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

The timber sourced from northern rivers is for woodchip and tomato stakes.

Don't plant within national and state forests. Plant elsewhere. Grow hemp for products. That's a manufacturing bonanza.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

It disturbs the forests and dries out the understorey. Grow hemp.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Unlimited tourism potential. Wildlife, walks, rock climbing, forest breathing, yoga, biking, tree climbing, camping |

Grow hemp on already cleared land.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Best carbon capture we have. Worth more standing.
