---

**Topic 1. Sustainability of current and future forestry operations in NSW**

There is nothing sustainable about destroying native forest

---

**Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values**

The forests are sacred to all who live in them and care for them

---

**Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail**

Ongoing development of plantation timber and other building materials is vital

---

**Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs**

We must reuse and repurpose our timber resources. New and innovative ways of building must be considered. Bamboo and hemp are excellent building materials

---

**Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models**

State forests need to preserve our native forests at all costs and increase and improve on the use of new methods of providing required materials

---

**Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests**

Trees preserve life for all. More trees mean more biodiversity.
