Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

I am not an expert in any of these areas, however I am a resident of NSW Mid-north Coast and it is clear that lands and forests that are home to native species such as koalas and flying foxes are being reduced by clearing and logging. Once their homes are destroyed we lose those species and they cannot be replaced. We have seen many of our native species go extinct over history. Maybe in the past the impacts were not understood, we know better now and should act to save these vital habitats and flora and fauna. We can do better and we should actively work to improve our planet and show compassion to those who have no voice, please show kindness. Thank you.
