Topic 1. Sustainability of current and future forestry operations in NSW

Interesting I live 50km NW of Brisbane on a mountain at 1300 feet above sea level and can see from the Sunshine Coast to the middle of Brisbane. All I see are trees trees with the odd patch of houses and urban infrastructure. Really sad to see the picture prompted by the Gov, Public Servants, politicians and others who destroy the activities which improve our standard of living and welfare.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Science supports harvesting of native forests if you wish to return more carbon to the soil. Old forests unharvested provide much less carbon return.
