Topic 1. Sustainability of current and future forestry operations in NSW

Please just stop logging old forest, koala and other wildlife habitat. We have one earth and destroying the little that is left after various interests decimated so much since 1776, eg. farming, agriculture and building must stop before there is nothing left.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

As above

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Grow building products, instead of decimating the natural forests

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

I do understand human needs for shelter etc., stop decimating for profits. The amount of destruction left behind after logging is a disgrace. It is out of control.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

State Forest needs to do a much better job of management instead of letting interest groups make profits. First Nations know how to care for the land start listening

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Leave the trees alone, including the fall. Dead trees are a necessity for regeneration, wildlife protection from fires and introduced risks.
