## **Topic 1. Sustainability of current and future forestry operations in NSW**

I support the eradication of the harvesting of native timbers in unsustainable ways. Given that creatures such as Koalas are threatened to become extinct, and that no proper plan is in place to support biodiversity I wish to support no native tree logging.

---

## **Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values**

Our biodiversity is at risk with current strategies. I don't want this anymore. I want the forests and native creatures to be thriving and supporting our own lives by existing with a healthy biodiverse system.

---

## **Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail**

Controlled farming of plantations and sustainable planting can occur but only with dedicated sustainable farming of properly planted and maintained forests that allow many trees to live for hundreds of years, and that allow forest floor rot to occur.

---

## **Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs**

as above.

---

## **Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models**

Ensure sustainability of all biodiverse creatures.

---

## **Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests**

You will only realise biodiverse benefits if our native animals don't go extinct. That won't happen without radical alteration to the forestry plans. Stop cutting down trees.
