Topic 1. Sustainability of current and future forestry operations in NSW

Logging native trees is simply not sustainable as it was one hundred years ago. Better to log plantation trees and leave the native trees to create home for animals.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Our native forests create hollows essential for homes for our wildlife. The more we log, the less hollows there are.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Best to use plantation trees not native trees. Since the land has already been cleared, use those lands to regrow trees for building purposes.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Bettter to use plantation trees not native trees. Since the land has already been cleared, use those lands to regrow trees for building purposes.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Our forests can definitely create work for our Original People or first Nations People, they know how it has been managed for tens of thousands of years. This will create more employment.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Our forests are a large asset for our Nation. The more we nurture our forests, the more aligned we become and connected to humanity for we are all intimately connected to Nature. we must support Nature, not destroy it.
