### **Topic 1. Sustainability of current and future forestry operations in NSW**

All forestry logging must be sustainable and not threaten the old forests as we need them to stabilise our environment, thereby reducing the effects of climate change.

---

### **Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values**

We need to put the management of the old growth forests in the capable hands of our indigenous people. They looked after and cared for our country for thousands of years.

---

### **Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail**

The high demand for timber products must come from plantation timber, and alternate products.
