Topic 1. Sustainability of current and future forestry operations in NSW

No sustainability we need to end native forests logging as soon as possible

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

I live on Birapi land lots of cultural values in the forests we have a healthy number of Greater Gliders in Bulga state forest but they are being heavily threatened as the logging has begun

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

We need to use other building materials and only use plantation wood

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Should be planting other mediums for building as well I think plantations are the go

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Great jobs for first nations people to caretake thalso tourists who visit our beautiful forests

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

We all know we are in a climate crisis the list is long for benefits of leaving the tree's in the ground. Carbon storage, water storage and supply to river systems. A logged forests more prone to fire, our threatened species have no where else to go
