Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

- a) Ending Native Forest Logging in NSW will also greatly benefit the fight to limit the effects of Climate Change, hence if logging stops next year a comparison would be to remove 840 thousand cars from the road for every year that is a massive benefit.
- b) As per Dr Jennifer Sanger stated in respect to Victoria's Forest Carbon Report stated Protecting forests is a low-cost, effective, and immediate way to achieve both emissions reduction and to absorb carbon from the atmosphere. It is a sensible step and a necessary one if the government is serious about climate action
