Topic 1. Sustainability of current and future forestry operations in NSW

Not sustainable in anyway logging destroys habitat causes erosion introduces weeds destroys carbon capture interferes with the water catchment

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Over 70% of wildlife on earth has been wiped out and Australia is one of the worst shamefully We need forests in tact now for habitat particularly for threatened species like greater gliders a great pollinator and koalas powerful owls etc

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Minimal amount of trees logged in forests are used for construction I think this would surprise most people that the majority is used for wood chip and pulp and exported a shameful fact

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Controlled plantation to meet timber needs instead of wood chip for toilet paper and cardboard boxes

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Environmental outcomes

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Carbon and biodiversity benefits are within in tact forests
