Topic 1. Sustainability of current and future forestry operations in NSW

I stand up and speak out for all Native Flora and Fauna and the Aboriginal Elders and Nations all around this land never ceded. Enough is enough. We all need to listen and respect the wishes of the True Traditional Owners of the Lands we call home. How much more destruction of Nature will it take? We all Custodians here to care for the Natural Environment for all future generations.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Having an Acquired Brain Injury been through a lot of brain destruction through my own internal flooding events and survived with challenges. I speak out for all the significant Aboriginal Cultural Heritage many of which are "hidden within the landscape". I speak out for all the Native Flora and Fauna some of which have been noted by many other submitters. We live on a desert Island upon the oldest continent and with that comes uniqueness which we all need to care and protect for the future.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

There are alternate products man made these days that need to be futher developed and utilised in future housing. We have destroyed too much and used up too much and now it is almost beyond time time be thinking beyond the pioneering ways. Mining is another big destructor which is harming the whole integrity of this our Mother Earth. This big Island here in the southern ocean that was invaded from those in the northern oceans in the last 250 years has been asulted enough disregarding the Original Peoples of the Land. In this technological age we can and must do better.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

KEEP OUT OF NATIVE FORESTS. They belong to Nature the Tradional Aboriginal Peoples with their Acestoral Lands they are responsible to Care for Country, and the Native Flora and Fauna that bend upon these. They can be land for softwood plantations and other means for future housing upon this limited desert Island.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Just get your act together. Employ and listen to the Elders the Traditional Owners which the Lands that make up this big Island. Look at your Reconciliation Action Plan and act accordingly. If it is not effective or non existant. ACT ON THAT. Seek out the appropriate organisation who can work with Forestry Corp and conduct the workshops needed. Then employ the Aboriginal Peoples who can ensure and manage the Proper Way future activies of Forestry Corp.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Slow down. Keep trees growing as a way to play their role in caring for this planet. Biodiversity is the way.
