Topic 1. Sustainability of current and future forestry operations in NSW

I strongly oppose the logging of native forests due to environmental impacts and destruction of wildlife habitats

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Logging native forests threatens native wildlife

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

There are alternate products which can be substituted and the industries which use timber should consider these as replacement

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

We need to keep our native forests at all costs. They are also helpful in lowering carbon emissions.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Think they do very little

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

It is preferable to keep our native forests rather than invest in windfarms and expensive renewable.
