Topic 1. Sustainability of current and future forestry operations in NSW

It seems obvious that it's not sustainable to keep logging our native forests.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

As a resident of regional NSW, I highly value our native forest. They're important for vulnerable flora and fauna, including koalas. And they're important for the well-being of the population.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

My understanding is that half of the logged native forests were turned into woodchip and sold overseas. How can this be good value? We turn our national treasure into woodchip?
