Topic 1. Sustainability of current and future forestry operations in NSW

I have heard that the Forestry Corporation has neglected its responsibilities to safely select timbers (trees) from the state forests. I believe that the whole operation is a farce and needs a cease work order put in place immediately. The operations are reckless and are without rhyme or reason. The greater Glider is now on the vulnerable list as endangered. have you seen this animal? Look it up! They are absolutely amazing animals. Absolutely Amazing!! They need habitat, they need forest, they need lots of it! The same goes for the Koala. The same goes for all of the other marsupials that call these forests their home. It is so sad that their habitat is disappearing by the reckless pursuits of the Forestry Commission! Unbelievable and it's unacceptable!!!

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

As above, the Aboriginal peoples own the land. It is theirs to manage. They should have the say! We should take note of their words of wisdom for they are at one with nature and understand the spiritual significance and connection to it of life as we know it on earth!

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Plantation timbers - Nothing else matters. Keep the native forests intact. Save the animals and all of the ecoculture that magnificently comes with it. This is essential for our own survival as well as the poor but magnificent Australian native animals.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Plantation only is the way to go - Put the Government grants into supporting the Forestry Commission workers to a regenerative system of healing the native forests by replanting. get the buggers being productive in regrowth instead of destroying our wonderful native forests that house the wonderful Aussie Marsupials

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Leave it up to the Aboriginal peoples.. They know how to nurture the land. The forests. They know!

Public submission

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Offset practices are wrong and should not be in place as a legal way for developers to destroy natural intact native habitat!
