Topic 1. Sustainability of current and future forestry operations in NSW

91% is sustainable, lands cleared should have the ongoing wood supply plantations have but we decide 9% needs to come from million year old forest/habitation

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

We've already got countless totems and gods gone extinct, gone, done, ruined can't get them back nor can the indigenous people who spent 1000s of years caring and worshipping, those threatened plants and animals, disappointing

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

After the 2019-2020 bushfire season maybe it's time to reevaluate the use of timber in home construction.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Sad thing to say as a nature lover and full time cared of the land but we clearly need more plantations, sick of it all being done in this beautiful country but the big businesses need a lap dog that does anything they say, for a little bit of plastic

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

We need to give all yes I mean all land management to the aboriginals from the farming to the mining to the rivers, oceans and all in between need to be cared for again by the people who know how to do it

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Here's it really plain and simple, we keep going at the rate we are going, we'll have nothing but desert with foxes, cats, pigs, deer just to name a few of our soon to be iconic creatures of Australia, no more Roos no more koalas no native vegetation and what comes with that in this beautifully warm country, FIRE, thanks for letting me ramble
