Topic 1. Sustainability of current and future forestry operations in NSW

I don't support logging in native forests. End logging urgently now not in 4 years or 2030.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

End native forest logging to protect animals and their habitat.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Don't support demand for timber products seek alternatives such as laminate

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Protect native habitat and animals I don't support private native forestry.

Australia has one of the highest land clearance rates in the world with largest animal extinction rates in world

We need more grey gums for koalas these need to be protected can't be logged.

Greater biodiversity to protect all native animals.

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Only support strong environmental outcomes protection of native habitat and native animals. It's about time animals and environment comes first. We need a big win for animals and environment. I don't support logging economic big business outcomes. This panel seems to be heavily reliant on support from business as usual logging housing industry.

I see no positive outcome to protect native forests by this panel and note the lack of independence and lack of balance and the heavy bias towards economics logging housing industry. This is noted by the lack of balance in your panel questions favouring timber and housing industry.

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Existing old growth forests need to be protected and new forests need to be established to promote new biodiversity now not in 4 years or by 2030 sick of hearing about delays Climate change loss of green house affect is real.

We must become world leaders not losers to protect the natural world protect .

Not just talk or have another enquiry which is another failure or simply fail complete.

Public submission

There must be honest ethical transparent accountability new planning laws which protect native habitat and animals

We see in nsw parliament the latest koala inquiry which states that koalas will become extinct in NSW by 2050.

Why because of poor planning laws weak land and environment courts corrupt powers pandering to quick profits and greed.

If we don't protect the environment and animals now we all loose in the future
