## **Topic 1. Sustainability of current and future forestry operations in NSW**

It should be clear now with decades of research that sustainable logging is the only option for the industry. By sustainable logging I mean "CUT ONE-PLANT ONE". The export of woodchip (other than from plantations designed for this) should be 100% banned. The industry must be restricted to sale of flitches to local builders and cabinet makers.

---

## **Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values**

These have been ignored for years, and are still being ignored. "Where can I buy a cabinet made from North Coast Red Cedar?

Why are we the most environmentally destructive country on earth?

---

## **Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail**

It is very simple - selected tree harvested, timber sawn and sold locally - 100%.

EPA be given the power to approve projects, resources to monitor and legal power to immediately shut down an operation for any breach. I have seen examples of current practices, and they are appalling.

---

## **Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs**

Very important.
