I am opposing the location of the proposed facility. It is too close to neighbouring properties.

The resources required to contain a malfunction of the facility aren't in the southern highlands. My background is in oil and gas, acid plants, fertiliser plants, recycling facilities and have multiple tickets in hazardous environments including fire fighting, first aid & inert atmosphere amongst others.

When one of these places goes up, they go up quickly and containment is almost impossible. You'll be at the mercy of an ugly fire ball and all the firefighting equipment in the next 20 suburbs won't help you.

This facility is going to help - don't get me wrong. Recycling is important but the health and safety of local residents is far more important than recycling.

This facility needs to be kilometres away from anyone should the worst happen. Second to that, the firefighting infrastructure needs to be increased 20 fold to be able to have a small chance of fighting a fire of this size.
