Please assess the development using criteria of need, (desperate need), location (a designated industrial area close to an existing large plastic processing facility (pipe), Council plans to develop proper road access to the industrial area (existing though slow), and the application of appropriate consent conditions that will enable the design, construction and operation, monitoring (and possibly abandonment) of the facility.

I am mindful of the refusal of developments at Marulan and Tarago intended to burn waste and produce electricity, notwithstanding the fact that the Marulan project was intended to use the same technology currently successfully employed in Kwinana (WA). At the time the Marulan project was considered, the Kwinana project and all the conditions of consent were available, but apparently ignored.

Over reliance on ill informed community and indigenous objections when considering developments such as this can and does prevent developments that will provide significant community benefits.
