*I am writing to object to this proposal on the grounds of the large scale of the project so close to a residential area, and even more importantly the fact that it is so close to water sources that lead into the Sydney water catchment area.*

*Putting this large scale industrial site so close to residential neighbours is incredibly concerning. Apart from the traffic issues that such a large scale project would produce, the possibility of microplastic pollution in the air/soil and water is just mind bogglingly high due to the process they are using to break down the plastic.*

*The environmental risk of microplastic pollution for our waterways is worrying - how can you fix it once the pollution is in there? You can't - and when the environmental report powerfully suggests that you can't rule out microplastic pollution this should be a red flag.*

*This type of manufacturing with such high risks of pollution to residents, environment, waterways should not go ahead.*
