We are opposed to the plasrefine facility because it is not the correct site for a huge

heavy industrial facility. It will be located too close to residents & is adjacent to an environmentally sensitive area according to local council.

We are extremely concerned about how close it will be to children & grandchildren who love to play outside in the fresh clean air, as well as the impact it will have on native birds & animals. This proposed sites is just unacceptable.

We also have grandchildren attending a local school within 1 klm of the site & sporting activities for children within the 1 klm radius.

We are wondering how a facility of this size can be considered for this site with all the toxic

micro plastics being released into the air, one way or another they cannot prevent it 100%, for people & animals to breathe in. Alongside of that you also have the noise factor within the

facility & noisy trucks coming & going.

I am extremely concerned about the lack of compassion towards the local community & the duty of care by government to local residents, why impact people's healthy lifestyle & tell them if it is a windy day, stay inside to avoid floating micro plastics. We certainly do not want them to have to change their daily lifestyle to remain healthy.

This land should not be considered for any type of industry, it is productive land for agriculture. There is plenty of unproductive land for an industry like Plasrefine along the Hume freeway between Sydney & Goulburn that could be used without impacting anyone's lives.

When making a decision I hope the local community is put first & you say NO to Plasrefine

because it is NOT the right site.

Regards
