I with my wife have lived in MossVale for 65 years. We have three grown adult daughters that grew up here with 7 grand children and 4 living here in this area.

If this development goes ahead in Moss Vale, especially where it is proposed the risks that come with it endangers the lives of many people including children, that surely should show it is not the right site. With the amount of large trucks traversing through the nominated path 24/7 especially past a daycare centre endangers the lives of residents walking, riding, parents or grandparents dropping children off and pickup at daycare centre, and just the local residents driving from A to B.

The potential risks of micro partials of plastics floating in the air could potentially affect asthmatics, affect animals (this area is largely populated with horses, dairy cattle, Lamas etc) that eat the polluted source of food, and most important our water sources, to which this area is part of the Sydney water catchment.

The major risk of fires on the premises that could or would send toxic fumes depending on wind direction all over the towns of Moss Vale, new Berrima, Berrima, Burradoo and Bowral that are highly populated. With this potential happening the amount of Fire services required to fight a fire of this magnitude would endanger our shire towns without backup for other fires or accidents.

As a plant of this size ages and with the ever increasing population grows these risks will increase.

Moss Vale is not the site for this type of industry. It will not promote future employment for our children and their children etc as being mainly run by robotics as I am led to believe
