Location: New South Wales 2575	
Attachment: N/A	

Submission date: 11/21/2024 2:55:29 PM

I am writing to express my strong objection to the proposed Moss Vale Plastics Recycling Facility. This project is raises significant traffic, public health and environmental concerns. The facility is planned for a location that is unsuitable for such an industrial operation. The potential for air and water pollution, noise disturbance, and traffic congestion is significant, and the long-term public health and environmental impact on the region are uncertain. The Local Council and community have consistently voiced its opposition to this project through various means, including petitions, public meetings, and submissions to the relevant authorities. The overwhelming sentiment is that the facility is not in the best interests of the local community and the broader environment. Furthermore, there are concerns about the proposed technology and its ability to effectively and safely recycle plastic waste. The potential for the release of microplastics into the environment is a serious issue with farreaching consequences for both human health and ecosystems. I urge you to carefully consider the objections of the community and the potential environmental risks associated with this project. It is imperative that the decision-makers prioritize the well-being of the community and the protection of the environment. I respectfully request that you reject the proposed Moss Vale Plastics Recycling Facility and explore alternative locations that are more sustainable and environmentally friendly.

Recycling plastics for NSW is an important issue, therefore I appreciate the applicants willingness to assist in solving this important issue for the state, but for the reasons stated above this is simply not the right site!
