Organisation: N/A	Key issues: <i>Social impacts, Visual impacts, design and landscaping, Land use compatibility (surrounding land uses), Traffic, Other issues</i>
Location: New South Wales 2577	
Attachment: N/A	

Submission date: 11/15/2024 2:03:41 PM

It is my understanding that this will be the largest recycling plant in the Southern Hemisphere with the narrowest buffer zone between factory and residents. Where does logic not prevail here? Placed near the Wingecarribee river whereby it was admitted under all perfect conditions there will still be 10% leakage of waste product. Once again, where does logic not prevail here? Why are residents who place trust in Government departments to look out for their best interests find themselves placed in the position of defending their own health and safety.

If there is the slightest possibility that this proposal might go ahead because of a paperwork technicality and box ticking exercise then we ask you, you must STOP. Stop and consider myself as a resident, my family as residents and those future generations that will be residents. STOP and consider the social and environmental damage that this proposal can cause. STOP and consider not just Moss Vale, not just The Southern Highlands but also Sydney Siders whose water will directly be affected by contamination. STOP and consider just because you can doesn't mean that you should. There ARE consequences. Say NO to Plasrefine.
