I am writing to voice my concerns over the environmental and community impact of the Plasrefine Centre in Moss Vale. There are a significant number of issues with both location, suitability, & community health.

The location itself is a residential area and does not have the infrastructure to support large scale operations such as this one. The area is not suitable for heavy industrial sites due to pollution, fire risk, & proximity to Garvan Institute.

The environmental impact is also a cause for concern. The site itself could have significant impact on many native animal populations due to habitat destruction, and water & air pollution. Not to mention the impact of these environmental disturbances on the flora population of the Southern Highlands.

The local population are also at risk from both environment and quality of living. The risks to the community of Moss Vale are significant due to pollution, fire, traffic, and employment. Personally, health concerns from the development are significant due to my elderly mother suffering from emphysema is also living in Moss Vale.

The Southern Highlands is a diverse community and those from low socio-economic backgrounds deserve to both live in an area not spoiled by pollution, and to be able to build on our reputation as a location for environmental tourism.

Working families, children and the elderly in Moss Vale deserve better. We are not arguing for a better site for Plasrefine for aesthetic purposes, but due to its proximity to our community and the significant concerns for its detrimental impact.
