Organisation: N/A	Key issues: <i>Social impacts, Visual impacts, design and landscaping, Land use compatibility (surrounding land uses)</i>
Location: New South Wales 2577	
Attachment: N/A	

Submission date: 11/18/2024 8:07:30 PM

*I ask you think carefully to the health issues something like this factory poses to children and the greater community. Our greatest commodity in life is our children and their future. This development poses a clear and present danger to their future due to the significant environmental impacts it will have on the land, waterways and air. Tell me I am wrong? You know I am right. It is not the correct place to put a factory like that, why is it after council, local MP's and community members say no a government body overrides all? Is it the money being offered? Why? Justify to me why this factory is necessary in this area and how you will mitigate the health risks associated with it?*

*Mark my words, any ill health that has a causal factor associated to that site will initiate civil litigation. Public money can be better spent than fighting that. Listen to the people that is what people are elected for, what is the use of a democracy if the system does not listen to its people when there are justifications to oppose such a development?*

*There are so many negatives to this proposal it's just the easiest by the sounds of it.*

*The southern highlands is a beautiful place with a beaming natural environment, this development will crush that and the local community. Health issues will rise, wildlife will be harmed. People will suffer so please listen and stop.*

*Listen to the local community, listen to the experts and stop such nonsense. Big developers should not be able to trash local communities and the environment. If it's so safe to build, why not build it in a national park?*
